

Climate change?
Olinga says:
'I'm not scared -
I'm prepared!'

Africans are set to feel some of the biggest effects of global warming according to the International Panel on Climate Change.

Climate: The
average weather
conditions over a
long period of time
– usually calculated
over 50 years.

Climate change:
An average increase
in the Earth's
temperature, which
causes changes in
climate.

Africa, home to 15%
of the world's
population, emits
less than 3% of
global pollutants.

There are lots of ways YOU can help to reduce climate change too, both at home and school.
