

Pirate Number Bonds of 10 Board Game

How to play

Print out either the A4 board or the large board made up of four A4 pages.

Print out the pirate counters and give one to each player. Alternatively, you could use your own counters such as Lego figurines.

Players take turns to roll the dice and move along the board. We have included a dice template that you could use in this download.

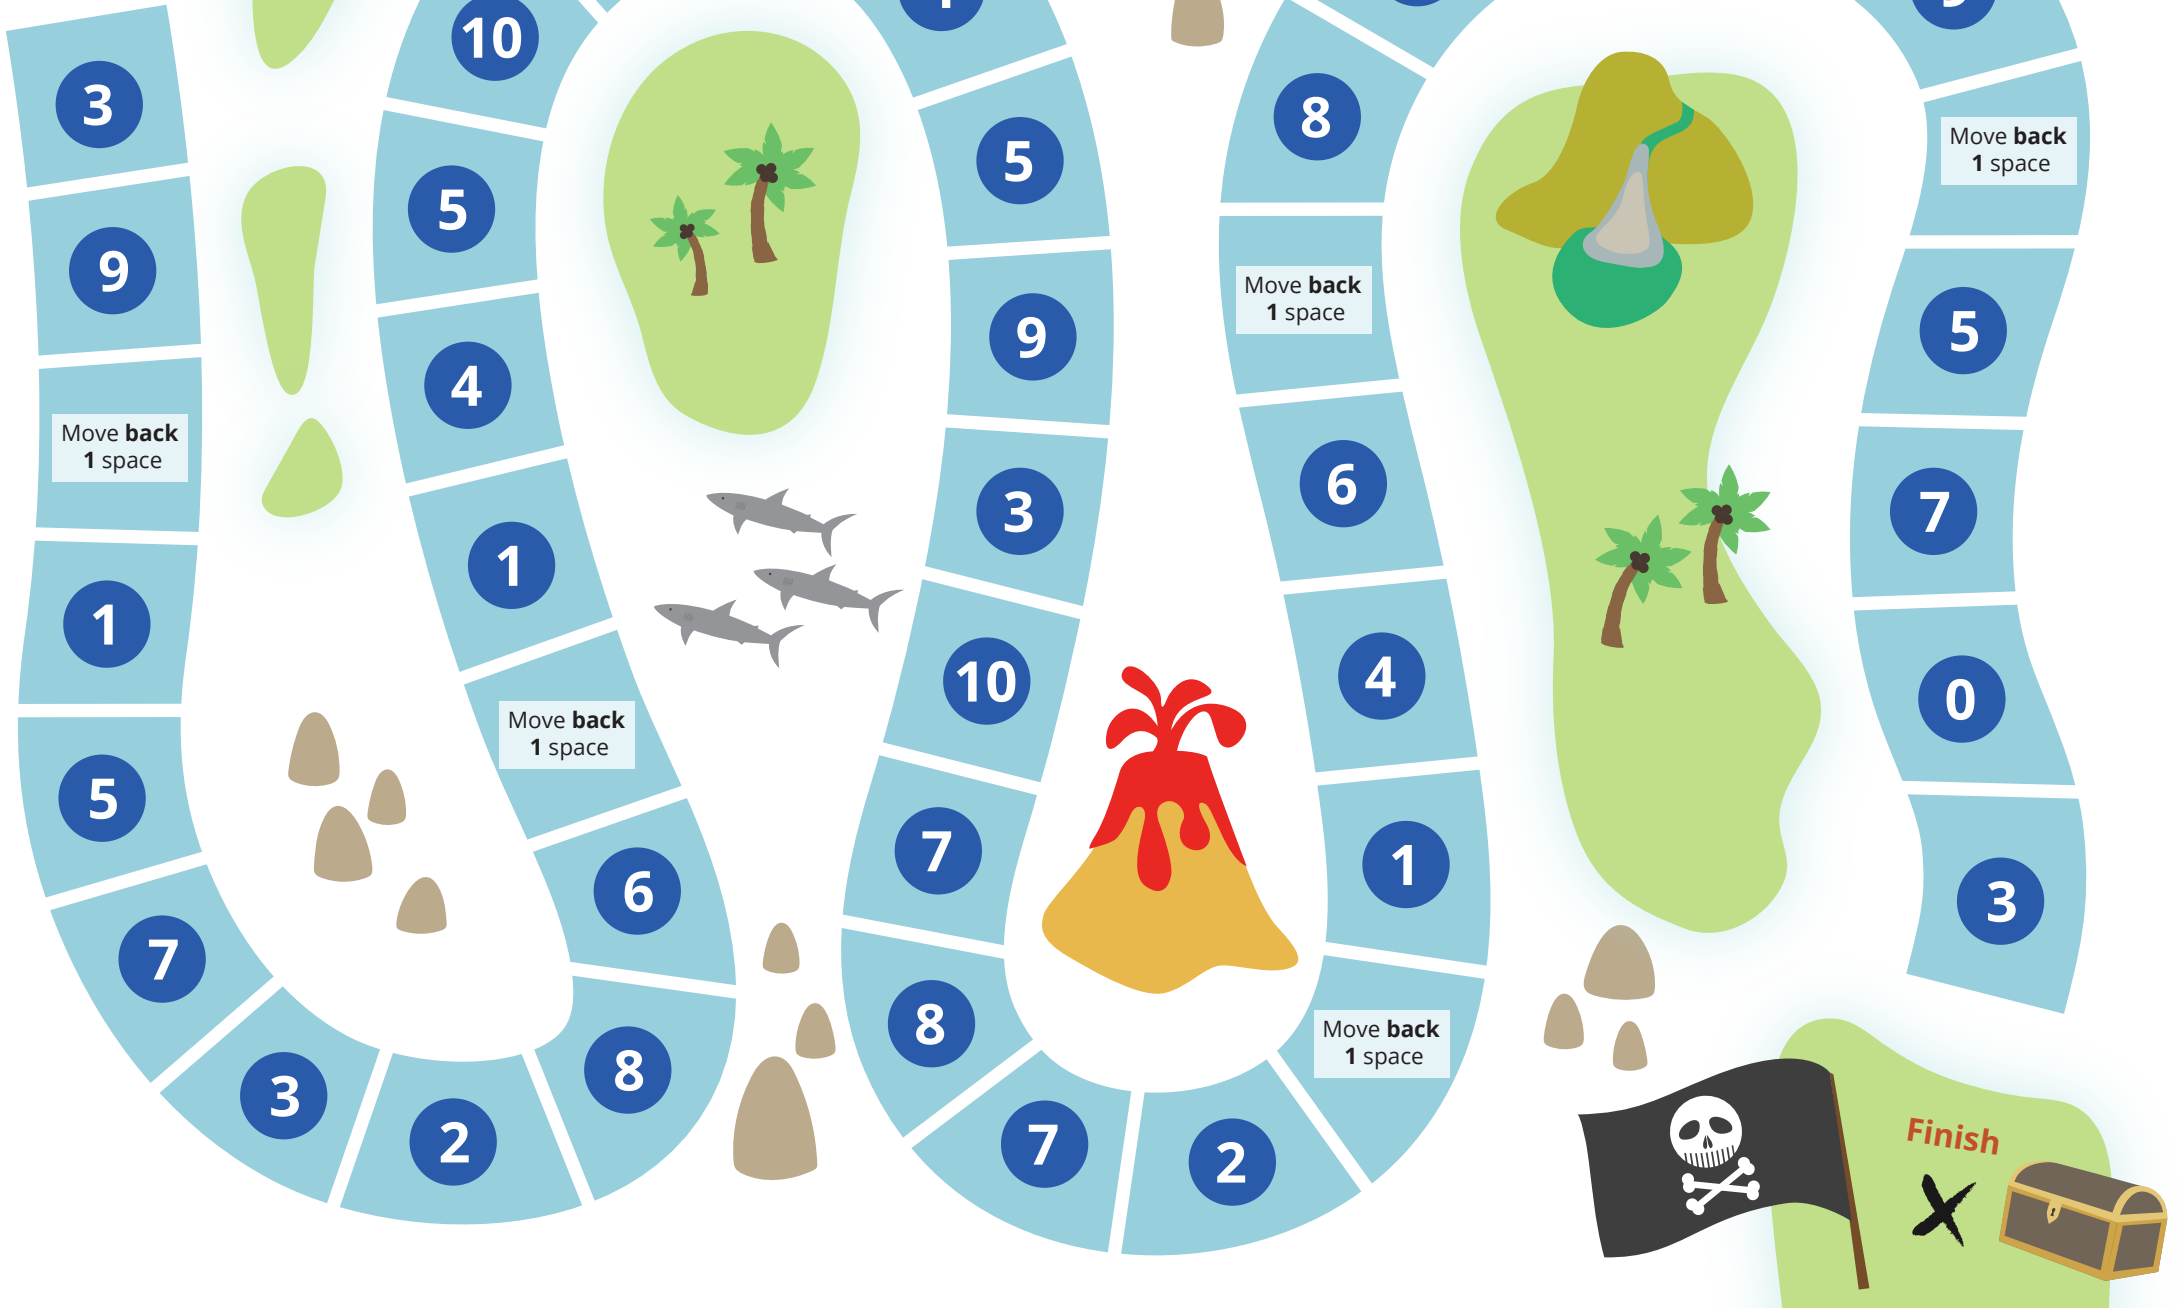

As players move around the board they will land on spaces that have numbers on them. They must say aloud the number that would need to be added to that number to make 10. If they are correct then they stay where they have just landed. If they are incorrect then they move back to where they started. The winner is the player that get to the end of the board first.

Variation

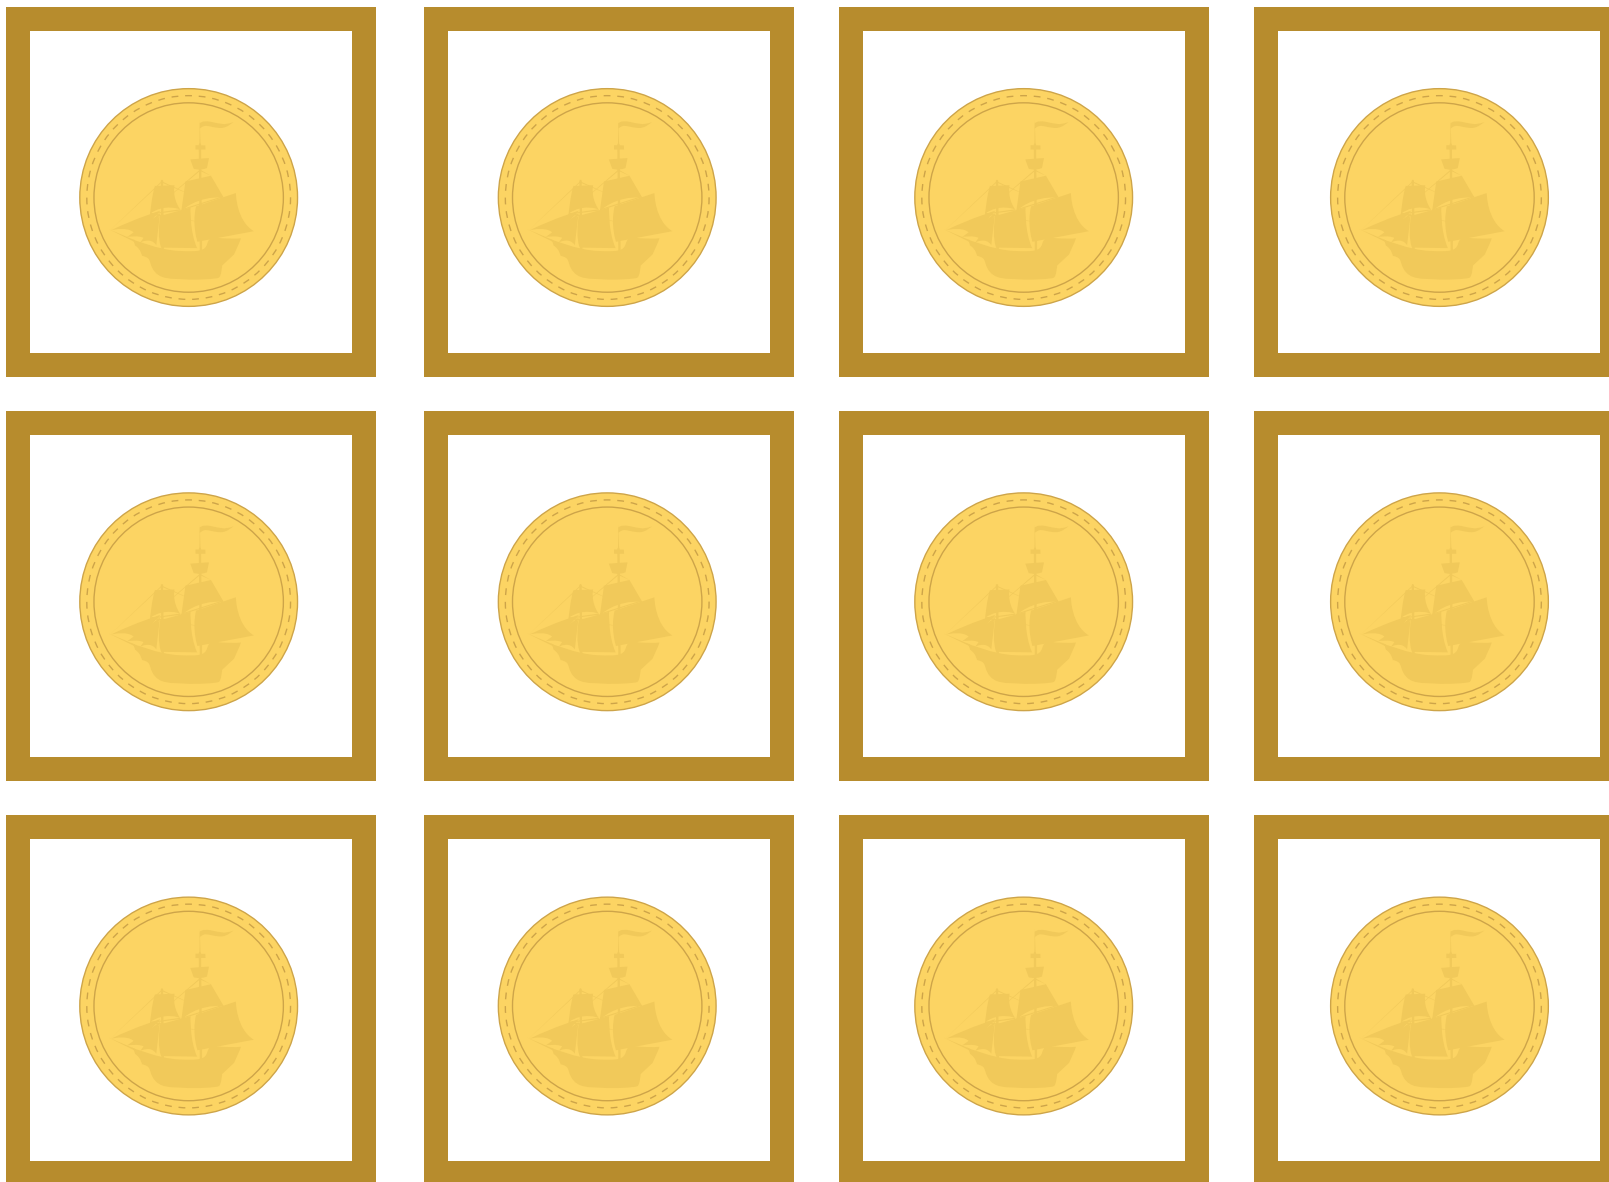

You could play a variation of the game where the children collect coins if they get the answer correct rather than keep their place on the board. We have included some printable coins that you can use for this purpose in this document. The player who gets to the end first gets an extra two coins. The winner is the player with the most coins when everyone has finished.

Start

Cut out and collect as you travel around the board (optional).
